Course Code: DSA0113

Slot: C

Course Name: object oriented programming in c++

Course Faculty: Dr. Sivanantham sivakumar

Project Title: SMART VEHICLE RENTAL AND SERVICE MANAGEMENT SYSTEM
Project Description: (here you write what you did in this project (contribution) including Model Description)
My contribution to the project focused mainly on developing the vehicle rental process, charge calculation, billing, and transaction management functionalities of the Smart Vehicle Rental and Service Management System. I worked on implementing the process of selecting an available vehicle, entering customer details, specifying the number of rental days, and calculating the rental and service charges. I implemented category-specific pricing for Cars, Bikes, Trucks, and Electric Vehicles so that each vehicle could generate its appropriate charges. I also contributed to developing the Bill class for maintaining rental charges, service charges, and total bill amounts. The rental transaction details such as transaction ID, customer name, vehicle ID, vehicle type, rental duration, and bill amount were stored for future reference. I also worked on updating vehicle availability after a successful rental and generating the transaction summary. This contribution helped me understand practical application development, data management, billing operations, and object-oriented programming concepts in C++.
